

Steel2chemicals demonstrates:

TECHNICAL FEASIBILITY

Analyze long term test results of CO to naphtha conversion

Analyze results of separating CO from N₂

Determine stability and performance of catalysts in the use of steelgases

Determine optimal process conditions for the efficient and effective conversion of CO to naphtha

Establish the success factors needed to scale up

ECONOMIC FEASIBILITY

To achieve an increased understanding of the preconditions necessary for the development of the Steel2Chemical value chain.

Identifying the challenges of bringing this value chain into being.
